

## INSTALL MANUAL FOR UTTI WEB SERVICE

### Installing the UTTI Web Service

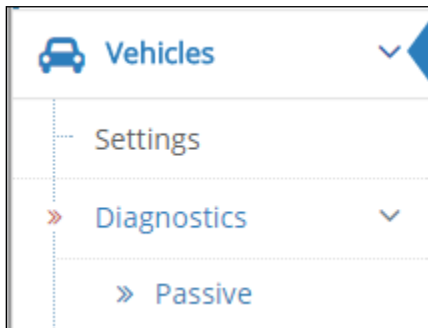

1. Create a directory c:/UTTITemp on the client machine.
2. Upload the installer (setup.exe) to the UTTITemp folder.
3. Run setup.exe to install the client software.
  - a. If the .Net framework needs to be installed, your system will ask for a reboot. You do not need to reboot for our software to function.
4. After the install is complete, wait a few minutes. The client software will update itself and restart.
5. You can check the processes in order to make sure the Silver Saiph Tracking process is running. There are two (2) options for verify that the process is running: via Windows Services or via the UTTI Web Reporting application.

### To Verify via Windows Services

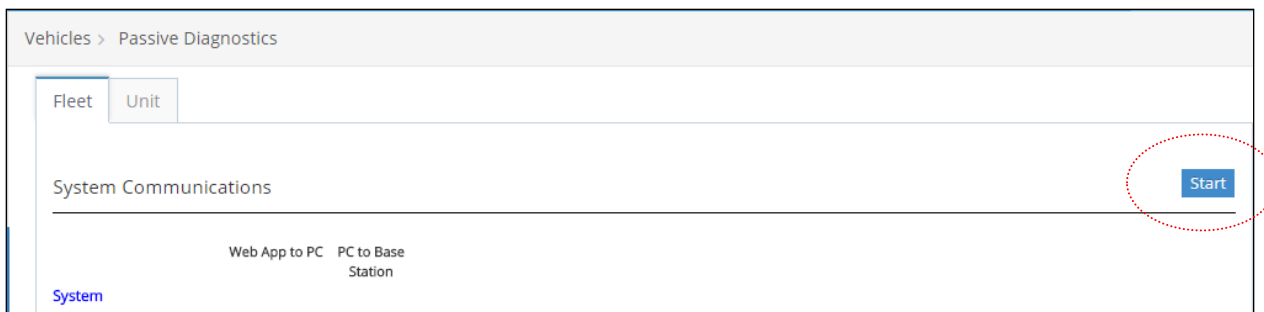

1. Access Administrative Tools>Services  
(For Windows 7, the "Services" are located: Control Panel\System and Security\Administrative Tools)
2. Locate the "Silver Saiph Tracking" Service. Click the start button if the service is not already running

### To Verify via UTTI Web Reporting Application

1. Access the Vehicles>Diagnostics>Passive page

2. Click the "Start" button

3. Verify the "Web App to PC" indicates "Success"

Once we have received the vehicles.mdb, we will upload to our server. The historic data will be available for reporting the following morning.
